Date: 27-03-25

1. **What is MSM, blueprint, live copy and rollout?**

   • **MSM (Multi-Site Manager)**: A feature in AEM that helps manage multiple websites efficiently by allowing content reuse and synchronization across different pages or websites.

   • **Blueprint:** In MSM, a blueprint defines the structure and configuration of a website, acting as the source for creating multiple live copies.

   • **Live Copy**: A copy of a page or site that maintains a relationship with the blueprint. Any updates made to the blueprint can be pushed to the live copy via rollout.

   • **Rollout:** The action of synchronizing changes from the blueprint to live copies, ensuring content consistency across multiple sites.

2. **What is language copy?**

   In Adobe Experience Manager (AEM), a **Language Copy** is a feature used to create multilingual versions of a website. It allows you to generate a copy of your content in a different language while maintaining the original structure. This is useful for organizations that need to provide localized content for different regions.
   How It Works:
   1. **Source Selection** – You choose the original language version of your site.
   2. **Target Language** – You specify the language you want to translate the content into.
   3. **Translation Integration** – AEM can integrate with translation services to automate the process.
   4. **Content Synchronization** – The translated version remains linked to the original, allowing updates to be rolled out efficiently.
